Experience

SDE Intern: IBM ISL • Bengaluru, India Feb 2026 – Aug 2026

- Developing a reusable Kubernetes deployment platform in **Go** using **Operator SDK**, evolving an internal automation framework for IBM BobZ microservices into a service-agnostic deployment solution.
- Built an automated deployment pipeline that discovers services, generates **Kubernetes Custom Resources (CRs)**, and provisions Deployments and Services through a custom Kubernetes Operator.
- Designed hybrid configuration- and discovery-driven deployment workflows supporting heterogeneous containerized applications, reducing manual deployment effort by **40%**.

Cloud Intern: Ola Krutrim • Bengaluru, India Dec 2025 – Feb 2026

- Deployed and monitored production AI inference workloads on **Krutrim Cloud** using Kubernetes-based infrastructure.
- Containerized machine learning services and optimized deployment workflows to improve reproducibility across development and production environments.
- Integrated model inference services with internal APIs and deployment pipelines, streamlining release and validation workflows.

Education

Dayananda Sagar University Aug 2022 – May 2026

B.Tech in Computer Science Engineering (Artificial Intelligence & Machine Learning)

GPA: 3.28

Projects

Adaptive Document Intelligence • AI Pipeline • Jun 2026 - Present

BackBenchDreamer/adaptive-document-intelligence

- Built a modular AI pipeline to extract structured information from financial documents using a feedback-driven learning workflow.
- Designed a modular pipeline architecture with reusable validation, testing, and document-processing components, supported by comprehensive documentation and evaluation workflows.
- Structured the project as a production-style codebase with documentation, changelog, validation reports, and containerized execution.

Tax Buddy • Full Stack • BackBenchDreamer/tax-buddy May 2026 - Present

- Developed a containerized full-stack tax management platform with separate frontend and backend services using Docker and Docker Compose.
- Designed deployment and architecture documentation to support reproducible local development and production-style workflows.
- Maintained a structured engineering workflow with issue tracking, contribution guidelines, and deployment documentation for iterative development.

Cosmolux • NASA Space Apps Challenge • BackBenchDreamer/Cosmolux Nov 2024

- Developed an interactive 3D solar system visualization using Three.js with real-time orbital simulation of planets and near-Earth objects.
- Optimized rendering performance through efficient animation and scene management to deliver smooth interactive visualizations.
- Built responsive educational visualizations showcasing WebGL, mathematical modeling, and frontend engineering concepts.

Leadership & Activities

Secretary • IEEE CIS Student Branch • Dayananda Sagar University Dec 2023 - Feb 2025

- Organized technical workshops, hackathons, and community initiatives for the IEEE Computational Intelligence Society student chapter.
- Coordinated the 30-hour Intercontinental Innovo Quest (ICIQ '24), an international hackathon held jointly with LeTourneau University (USA), supporting 50+ participating teams.

Awards & Recognition

Runner-up • SMART AGRO Hackathon • REVA University

Nov 2023

- Awarded Runner-up for developing *Crop Craft*, an IoT-based smart farming solution for real-time soil monitoring and crop health analysis.
- Designed an end-to-end prototype integrating embedded systems, cloud connectivity, and data-driven decision support.

Technical Skills

- **AI Engineering:** LLM Applications, Prompt Engineering, Document Intelligence, Computer Vision, PyTorch, TensorFlow, scikit-learn
- **Backend Engineering:** Node.js, REST APIs, Docker, Docker Compose
- **Cloud & Infrastructure:** Kubernetes, Linux, CI/CD, Oracle Cloud (OCI)
- **Frontend:** React, HTML, CSS, Three.js
- **Languages:** Python, Java, JavaScript, C++ , SQL
